

## ChatGPT on JustMySocks network

Short summary:

Great news! Starting from April 12, 2023, ChatGPT access is now available for all our customers without any extra configuration changes.

Shadowsocks servers (s1, s2): You can use ChatGPT on existing/authenticated sessions, but be aware that the login page will be blocked.

v2ray servers (s3, s4, s5, s801): You now have full ChatGPT functionality, including login and use. However, it might be a tad slower than on s1 and s2 due to the workaround we've implemented to make it work.

More details:

We understand how crucial it is to have access to ChatGPT nowadays. Lately, connecting to OpenAI servers from our network and many other datacenters/hosting providers has been increasingly difficult. It's disheartening that a company aiming to help people is limiting access to such a valuable tool. They might be facing abuse, but simply blocking numerous providers isn't the right solution, especially given their mission.

You might have noticed that we've been tackling this issue for some time now. We made every effort to contact OpenAI through various channels in hopes of finding a resolution, but sadly, we received no response.

Despite this setback, we've been working tirelessly on our own workaround, which was launched on April 12. We're very happy with its performance so far and are closely monitoring the network to ensure good performance, and we're ready to take further action if necessary.

Parts of this message have been written with the help of ChatGPT.
